Summary

Data Analyst with a strong background in healthcare technology, data standards, and transformation processes. Adept at managing complex data workflows from raw data collection to standardized formats. Passionate about solving complex problems, driving business value, and improving outcomes in the healthcare space. Experienced in data modeling, clinical terminologies, and ETL processes, with a portfolio of projects demonstrating data analysis and visualization expertise.

Skills

PROGRAMMING	Python, SQL, R	DATA ANALYSIS & VISUALIZATION	Pandas, Matplotlib, Seaborn, Tableau, Power BI
MACHINE LEARNING	Scikit-learn, TensorFlow	DATABASE MANAGEMENT	MySQL, PostgreSQL, SnowSQL
TOOLS	Jupyter, Git, Excel	DATA STANDARDS & TERMINOLOGIES	SNOMED CT, LOINC, RxNorm
DATA MODELING & INTEGRATION	ETL processes, relational databases, graph databases	SERIALIZATION FORMATS	XML, JSON

Professional Experience

01	ANSWER ALS	February 2022 - Present
	Data Concierge	
	- Contributed to OMOP Common Data Model transformations, mapping clinical data to standardized terminologies. - Developed pipelines for transforming raw clinical data into standardized formats for research use. - Automated user acceptance processes with Python scripts, reducing manual effort. - Validated data integrity across multiple drops and supported data curation. - Facilitated data portal interactions, optimizing access for research purposes.	

Data Analyst

- Created SQL views in Snowflake for dashboard integration.
- Performed ETL on census data, transforming it for analysis.
- Investigated data across healthcare, demographics, and income to derive insights.
- Extracted, loaded, and explored HMDA data, leading to widget creation for visualization.

Data Standards Intern

- Ensured alignment of data with standardized health data sources.
- Transformed data dictionaries and created JSON code for the Data Collection Platform.
- Developed e-Consent documents to meet legal and functional standards.

Software Quality Assurance Intern

- Created survey code for data collection, contributing to a comprehensive survey library.
- Assisted with integrating survey data into new structures.
- Automated QA tasks using Selenium, improving software testing workflows.
- Created and maintained data dictionaries to ensure compliance with health data standards.

Projects

Variant Report Tool

Production web app in an ALS research data portal for exploring whole genome sequencing variant data. Builds multi-sheet Excel variant reports for a chosen gene list and participant set, runs genotype-first lookups that turn a locus or rsID into the participants carrying that variant, and plots cohort variants in an embedded igv.js genome browser.

Tools: Python, Panel, Azure SQL, Azure Blob Storage, igv.js, Azure App Service

Live: neuromine-variant-reports-prod.azurewebsites.net

Gym Tracker

Personal training dashboard built on every workout I log. Tracks weekly volume, splits, body part frequency, and exercise PRs, with an interactive 3D body diagram and an AI coach that answers questions directly against the lift database.

Tools: Next.js, PostgreSQL, Recharts, React Three Fiber, OpenAI

Live: datawithdillon.com/demos/gym
